

“Take five seconds and ask yourself: Is this safe enough?”

Jan Emil Warhuus

*Formwork carpenter,
crane operator and safety representative*

Every construction project is different. But the risks are the same.

The six major hazard areas in the industry are:

- Falling objects
- Electric currents
- Falls from heights
- Large vehicles
- Blasting/explosions
- Crushed/trapped

No one should become ill, injure themselves or, in the worst case, lose their life as a result of working at or for Veidekke. The most important thing of all is that everyone should be able to go home safe and in one piece every single day.

“My driving force
is that everyone
should come home
to their nearest
and dearest”

Johanna Johansson
Project Engineer
